

## Environmental Impact Assessment, Summary

### Table of contents

1. Project Description
  - 1.1 Geographic and economic framework
    - 1.1.1 General aspects
    - 1.1.3 Cities of Fray Bentos and Mercedes
    - 1.1.4 Productive framework
    - 1.1.5 Reasons for installation of a cellulose pulp mill
  - 1.2 General mill characteristics
    - 1.2.1 Location
    - 1.2.2 Areas used by the plant
  - 1.3 Cellulose manufacturing process characteristics
    - 1.3.1 General
      - 1.3.1.1 Selection of technology to be employed
        - 1.3.1.2. Labor working directly in the plant
        - 1.3.1.3 The Kraft process
        - 1.3.1.4 Mill cycles
      - 1.3.2 Production processes
        - 1.3.2.1 Mill wood supply
        - 1.3.2.2 Wood preparation
        - 1.3.2.3 Cooking, washing, purification and delignification with oxygen
        - 1.3.2.4 Bleaching and chemical bleaching preparation
        - 1.3.2.5 Preparation of chemical bleachers
        - 1.3.2.6 Chemical substance consumption
        - 1.3.2.7 Drying
        - 1.3.2.8 Pulp transportation
        - 1.3.2.9 Evaporation and recovery boiler
        - 1.3.2.10 Energy
        - 1.3.2.11 Causticizing and lime kiln
        - 1.3.2.12 Water consumption
        - 1.3.2.13 Steam, condensate, feed water and water refrigeration systems
        - 1.3.2.14 Optional systems
2. Main impact factors
  - 2.1 Liquid effluents from the mill
    - 2.1.1 Type of liquid effluents
    - 2.1.2 Effluent treatment
    - 2.1.3 Treatment characteristics
    - 2.1.4 Rain water management

# BOTNIA

- 2.1.5 Sanitary effluents
- 2.1.6 Sludge manipulation
- 2.1.7 Rain water, spill prevention, material storage
- 2.1.8 Final effluent
- 2.1.9 Reduction of liquid effluent generation during the different processing stages
  
- 2.2 Atmospheric Emissions
  - 2.2.1 Atmospheric emission characteristics
  - 2.2.2 Atmospheric emission elimination and treatment systems
    - 2.2.2.1 LVHC Gases
    - 2.2.2.2 HVLC Gases
    - 2.2.2.3 Electrostatic Precipitators
  - 2.2.3 Reduction in the generation of atmospheric and gaseous emissions during the different stages of the process
  
- 2.3 Solid waste management
  - 2.3.1 Modern pulp mill solid waste
  - 2.3.2 Forestry plantations
  - 2.3.3 The compost alternative
  - 2.3.4 Landfill
  - 2.3.5 Hazardous solid waste
  - 2.3.6 Reduction of the generation of solid waste during the different stages of the process
- 2.4 Noise
- 2.5 Physical presence in the landscape

## 3. Receiving Environment and Possible Impacts

- 3.1 Characteristics of the receiving environment
  
- 3.2 The Uruguay River and possible impacts
  - 3.2.1 Physical characteristics of the river in its lower course
    - 3.2.1.1 Uruguay River
    - 3.2.1.2 Water quality
    - 3.2.1.3 Water uses
      - 3.2.1.4 Municipal and industrial effluents
      - 3.2.1.5 Industry and watering
      - 3.2.1.6 Fishing and navigation
  - 3.2.2 Physical Impacts
    - 3.2.2.1 Impacts of effluent discharges of the pulp mill
    - 3.2.2.2 Confirmation with hydrodynamic simulations
  - 3.2.3 River biology
    - 3.2.3.1 Biological Impacts
  
- 3.3 Smaller water courses
  - 3.3.1 Impacts on small water courses
  
- 3.4 Environmental air
  - 3.4.1 Impact on the atmosphere

# BOTNIA

- 3.5 Sound levels (noise)
  - 3.5.1 Areas not directly affected by highway traffic
  - 3.5.2 Highway traffic sound levels
  - 3.5.3 Noise impact
  
- 3.6 Soil characteristics of the site
  - 3.6.1 Impact of soil and land use
  
- 3.7 Geology, hydrogeology and subterranean water
  - 3.7.1 Fray Bentos formation (Upper Oligocene – Upper Miocene)
  - 3.7.2 Asencio formation (Upper Cretaceous)
  - 3.7.3 Mercedes formation (Upper Cretaceous)
  - 3.7.4 Aquifer top
  - 3.7.5 Impact of geology, hydrogeology and subterranean waters
  
- 3.8 Biotic impact
  - 3.8.1 Flora
    - 3.8.1.1 Impact on flora
  - 3.8.2 Fauna
    - 3.8.2.1 Impact on fauna
  - 3.8.3 Impact on river biology
  
- 3.9 Socioeconomic impacts
  - 3.9.1 Impact on the Population and Society
  - 3.9.2 Forestry sector impact
  - 3.9.3 Impact on regional economy
  - 3.9.4 Impact on national economy
  
- 3.10 Symbolic impact
  - 3.10.1 Landscape description
    - 3.10.1.1 Impact on the landscape
  - 3.10.2 Archeological aspects
  - 3.10.3 Historical, cultural and recreational interest sites
    - 3.10.3.1 Impacts in historical, cultural and recreational interest sites
  
- 4. Risk prevention and contingency plans
  - 4.1 Measures to improve environmental efficiency and prevent risks
  
  - 4.2 Prevention of accidents that risk environmental impact
    - 4.2.1 Bypassing the effluent treatment plant
    - 4.2.2 Insufficient operation of the effluent treatment plant
    - 4.2.3 Incorrect operation of the concentrated odorous gas system
    - 4.2.4 Incorrect operation of the weak odorous gas system
    - 4.2.5 Chemical plant accidents
    - 4.2.6 Fuel oil spills
  
  - 4.3 Spill prevention

# BOTNIA

- 4.4. Operations planning and implementation
  - 4.4.1 Good management practices in the mill
  - 4.4.2 Systems and safety plans for possible emergency situations
- 5. Monitoring, management and policies of the company
  - 5.1 Environmental monitoring
  - 5.2 Effluent treatment monitoring
  - 5.3 Monitoring of Uruguay River
  - 5.4 Monitoring of process gas emissions
  - 5.5 Monitoring of environmental air
  - 5.6 Monitoring of underground water
  - 5.7 Land monitoring
  - 5.8 Plantation monitoring
  - 5.9 Compensation measures
  - 5.10 Withdrawal plans, if needed
  - 5.11 Management and environmental audit
    - 5.11.1 Evaluation of the importance of possible impact, prevention methods and credibility.
    - 5.11.2 The company's technical and organizational team.
    - 5.11.3 Project's policies and environmental objectives
- 6. Conclusions
