

**Standard Impact Indicators for
Infrastructure, Health, and Education Projects
June 2008**

Infrastructure, Health, and Education Standard Indicators		Products						Definitions / Clarifications / Examples
		Advisory Mandates	Africa Schools	Project Development with sponsors	Small Infrastructure Advisory	Sub-national Finance	Support for extending access	
Indicators								
IMPACTS	Value of investment/financing facilitated by advisory services (US\$)	C	C	C	C	C	C	Total amount of private investment required to implement the project, expressed in US\$. When investment is expected to take place over a period of time, the value is expressed as NPV using 10% discount rate. It is assumed that no private investment would be mobilized without IFC Advisory Work.
	Number of people positively affected (direct and indirect)							Estimated total number of people served by the private operator providing basic services (water, wastewater, electricity, education, and health care.) This captures both expanded access for new customers and improved service for existing customers.
								Water, wastewater: Number of people served by the private operator.
		C	C	C	C	C	C	Electricity: Number of people served by the private operator. For generation and transmission projects, convert the Mwh generated/transmitted into number of customers, using IEA statistics on average electricity consumption for each country. Avoid double counting where IFC is engaged in different segment of the sector.
							Education: Number of enrollment.	
							Health: Number of outpatients and inpatients treated/Number of patients securing insurance.	
	Fiscal Impacts	C	C	C	C	C	C	Net fiscal effects of the project to the government, expressed in US\$. (NPV using 10% discount rate.) The value includes both payment from a project company to the government (e.g. concession fee, royalties, tax), and from the government to the project company (e.g. avoided subsidies).
