IFC is the only global private sector development bank with the capacity to create a pipeline of climate investment projects, de-risk these opportunities, and mobilize private capital at scale.

Last year, climate finance investments accounted for 46% of IFC’s own-account commitments.

The total quantity of carbon emissions IFC helped developing countries avoid last year, the equivalent of taking 3 large-scale coal power plants off the grid.

IFC has financed more than 22 gigawatts of affordable renewable energy in emerging markets - the installed renewable power capacity of Austria (source: IRENA)

IFC Climate & Sustainability
IFC is working to accelerate a resilient and inclusive transition to low-carbon growth in developing countries, by mobilizing private climate capital to the most challenging locations.
