“Ногоон таксономи”-ийг батлах тухай

Олон улсад мөрдөгдөж буй Ногоон эдийн засгийн нийтлэг зарчим, шалгуур үзүүлэлтийг нэвтрүүлж, Монгол улсын Ногоон эдийн засгийг хөгжүүлэх зорилтын хүрээнд Төв банк /Монголбанк/-ны тухай хуулийн 27² зүйлийн 5 дахь хэсгийн 5 дахь заалт, 28 дугаар зүйлийн 1 дэх хэсгийн 1 дэх заалт, Санхүүгийн зохицуулах хорооны эрх зүйн байдлын тухай хуулийн 16 дугаар зүйлийн 1 дэх хэсгийн 5 дахь заалт, Монгол Улсын Засгийн газрын тухай хуулийн 24 дүгээр зүйлийн 2 дахь хэсгийг тус тус үндэслэн ТУШААХ нь:

“Ногоон таксономи”-ийг хавсралт ёсоор баталсугай.

Acknowledgments

Sustainable Finance development in Mongolia has always relied on the active participation and engagement of various stakeholders, across borders, across sectors, and across disciplines. With the green taxonomy, it's taking the first leap towards sector-wide green development, to go deeper within and beyond the banking sector as defined in our National Sustainable Finance Roadmap.

The Green Taxonomy was developed by the Mongolian Sustainable Finance Association, Tsinghua University's Center for Finance and Development, the International Finance Corporation, and approved by the Financial Stability Commission of Mongolia – Central Bank of Mongolia, Financial Regulatory Commission, Ministry of Finance, and the Deposit Insurance Corporation. In addition, the Ministry of Environment and Tourism has provided significant support in the development of this document.

The authors would like to express their gratitude to those who have taken their time to provide extensive feedback and played an integral role in ensuring local practice and policy coherence; the technical experts of the Ministry of Construction and Urban Development, Ministry of Agriculture and Light Industry, Ministry of Energy, Ministry of Road and Infrastructure, Energy Regulatory Commission, Financial Regulatory Commission, the General Agency for Specialized Inspection, Mongolian Agency for Standardization and Metrology, Ulaanbaatar Municipality Office, National Development Agency, the GCF Focal Point – NDA, Agronomes et Vétérinaires sans frontières (AVSF), and the Dutch Development Bank (FMO). Furthermore, Mongolian banks have provided market insights ensuring usability and practicality. Last but not least, the document has benefited from feedback by professional non-government organizations, businesses, universities, project units, international development organizations, and international financial institutions.

INTRODUCTION

1. BACKGROUND AND RATIONALE

Mongolia has defined its national policies and strategies towards a development path in which economic growth, environmental balance and social stability co-exist. As part of its commitments under the Paris Agreement and the National Green Development Policy (2014), the country strives to achieve a 22.7% reduction in total national greenhouse gas (GHG) emissions compared to the projected emissions under a business-as-usual scenario. In addition to climate change, pollution is one of Mongolia's most critical environmental concerns. The National Program on Reduction of Air and Environmental Pollution (2017) aims to decrease air pollutants by 80%, prohibit the use of unprocessed coal anywhere except for thermal power plants in Ulaanbaatar, and reduce air and environmental pollution by at least 50% by 2025¹. Furthermore, Mongolia has set ambitious targets in areas such as climate adaptation, water efficiency, waste management, job creation, income equality, and the development of a stable, professional governance system.

The total investment required to finance the Mongolian National Green Development Policy, alone, is estimated at US\$6.96 billion. Taking into consideration, the Nationally Determined Contribution (NDC) and other government targets, the annual green investment needs of Mongolia range from US\$690 million to US\$1.03 billion according to studies conducted by the UN Environment². The revised NDC currently under submission to the UNFCCC is estimated to require US\$11.7 billion. These estimates make it clear that public funds will be insufficient, and capital from the private sector and international investors will need to be leveraged.

To support this shift, the banking sector in Mongolia put devoted efforts into promoting sustainable finance. Since 2013, banks have been working in collaboration under the Mongolian Sustainable Finance (MSF) Initiative, a voluntary, market-led project aimed at integrating environmental and social considerations in lending and investment activities. In 2018, Mongolia introduced its National Sustainable Finance Roadmap up to 2030, which marks a vast reform agenda in the financial system to embed sustainable finance beyond banking, in insurance, capital markets and institutional investors.

However, the successful realization of these policies and targets is challenged by the lack of common understanding of which projects can be considered as environmentally sustainable for investment purposes (such as green loans and green bonds). This creates an obstacle for project developers and banks seeking

1 http://www.wpro.who.int/mongolia/publications/20180228_policy_brief_on_air_pollution.pdf (pg. 4)

2 National Sustainable Finance Roadmap of Mongolia. UN Environment, IFC, MSFA. 2018 (pg. 18)

to identify and compare opportunities for green finance³. In turn, it increases project assessment and monitoring costs and creates a significant discouragement for financial institutions to shift capital into green projects. Furthermore, the lack of clear definitions around what exactly constitutes “green” leads to a growing risk of “greenwashing” - wherein parties take advantage of the popularity generated by environmental commitments without genuinely contributing to environmental goals⁴. The inexistence of green finance definitions, taxonomies and technical criteria makes it also challenging to measure overall progress of Mongolia’s national climate finance targets.

Addressing this issue, the National Sustainable Finance Roadmap identified the definition of green finance activities as one of the most critical, priority activities to be implemented. The development of a commonly agreed green taxonomy is a building block to create an operational sustainable financial system, and will help re-orient capital to sectors and projects that substantially contribute to environmental sustainability and emission reduction.

Responding to this demand, a Green Taxonomy Committee consisting of key financial regulators, ministries, financial sector industry associations was established in February 2019 with the objective to create a green taxonomy framework that provides a list of economic activities eligible for green investment. To support the Committee, 6 technical working groups were established bringing together representatives from policy making and standard setting government organizations, financial institutions, businesses and project developers, international organizations, industry experts, and civil society institutions. The Committee and working groups were advised and supported by the Tsinghua Center of Finance and Development and Columbia University experts who shared their valuable knowledge based on China’s experience of developing and implementing a green bond catalogue and green lending guidelines, as well as globally used taxonomies and best practices of organizations such as CBI, GBP, IDFC, IFC, EIB, FMO, GCF and the European Union.

The activities identified in this version of the taxonomy will be reviewed every 3-5 years following policy shifts, scientific developments, technological changes, and new industry needs in the green finance space.

2. OBJECTIVES AND SCOPE OF APPLICATION OF THE TAXONOMY

The **overall objective of the green taxonomy** is: “To develop a nationally agreed classification framework of activities that contribute to climate change mitigation, adaptation, pollution prevention, resource conservation, and livelihood improvement in the context of green finance.”

The specific objectives of the taxonomy are to:

- 3 “Green Taxonomy Working Group Report”. Green Finance Leadership Program. 2019 (pg. 1)
Approved by the Financial Stability Commission of Mongolia
- 4 “Assessing the ‘Green Finance’ Boom: a Green Gold Rush or just Greenwashing?”. University College of London. 2018

- Provide financial institutions, businesses, policy makers, and other market players with a common understanding and approach to identify, develop and finance green projects.
- Support investors' confidence to finance green projects and mitigate the risk of "greenwashing".
- Boost green finance flows from various sources including the private sector, international financial institutions, and foreign investors.
- Track private sector investments in green projects, and measure the impact contribution to Mongolia's green development and climate change related policies and targets.
- Inform and help shape national policies and regulations on green finance that will boost the market development of green opportunities

The green taxonomy is designed to be **applied to a wide range of financial instruments** including corporate lending, consumer lending, project finance, SME finance, green bonds, equity investment, insurance, credit guarantee, grants, financial advisory and technical assistance, among others.

In addition to its wide scope of application, the taxonomy can also be used by various market players. Below are some of the **primary users of the taxonomy and possible applications**:

Market players/stakeholders	Examples of application
Financial institutions (e.g banks, NBFIs, Development banks, mortgage corporations, institutional investors, credit guarantee funds, insurance companies)	Use as a guide to i) develop green finance strategies, ii) identify and compare green finance opportunities and pipelines, iii) design green financial product criteria, iv) measure and report on existing and new green finance flows in the portfolio, v) educate and raise awareness among clients.
Bond issuers (corporate, municipal, government)	Use as a reference to i) develop eligibility criteria of the projects, ii) assess and select projects/activities to be financed with the green bond, iv) tracking of the proceeds, v) reporting on the allocation of proceeds.
Industry (corporate, SMEs, start-ups, and other types of project developers)	Use as a guide to identify opportunities to i) integrate "green" elements in the company strategy and operations, ii) review and compare green technology options, iii) develop new green projects, iv) understand the technical/impact eligibility for green finance options.
Verification and standard-setting companies	Use as a reference to conduct pre- and post-issuance impact assessments, define baselines, certify and label green projects, and conduct verifications of the use of proceeds.
Policy makers	Use as a basis for further policy action in the area of green finance, including standards, labels, incentive mechanisms, and any potential changes to prudential rules.

3. APPROACH TO DEVELOPING THE TAXONOMY

The green taxonomy framework is developed in adherence to the following 6 principles⁵:

Principle 1: Contribute to national policies and targets

The taxonomy should contribute to the key environmental targets included in Mongolia's green development and climate change related policies, strategies, programs.

Principle 2: Address environmental challenges

Mongolia's key environmental challenges should be addressed – i) climate change mitigation and adaptation; ii) pollution; iii) resource conservation iv) livelihood improvement.

Principle 3: Cover high-emitting, key economic sectors

The taxonomy should cover the highest emitting sectors in the economy as well as contribute to the transition of key economic sectors into sustainable ones.

Principle 4: Align with international standards and good practices

In the absence of commonly agreed local standards, the taxonomy should reference international standards and best practices.

Principle 5: Comply with ESG standards

Minimum environmental and social risk management regulations and standards (i.e the Mongolian Sustainable Finance Principles and Sector Guidelines) should be applied to all types of activities included in the taxonomy.

Principle 6: Continues review and development

The taxonomy will require continues review and update based on policy shifts, scientific developments, technological changes, and new industry needs.

In alignment with the above mentioned principles, the overall categories proposed in the taxonomy framework are:

⁵ China Green Bond Catalogue. Green Finance Committee of China Society of Finance and Banking. 2015

No	Categories	Key reference policy targets
1	Renewable energy	<ul style="list-style-type: none"> • Reduce greenhouse gas emissions in the energy sector by 32% by 2030 • Increase renewable electricity capacity from 7.62% in 2014 to 20% by 2020 and to 30% by 2030 as a share of total electricity generation capacity • Reduce internal energy use of Combined Heat and Power plants (improved plant efficiency) from 14.4% in 2014 to 11.2% by 2020 and 9.14% by 2030 • Reduce electricity transmission losses from 13.7% in 2014 to 10.8% by 2020 and to 7.8% by 2030. • Improve energy efficiency of designated entities by 15% (first phase)
2	Energy efficiency	
3	Green building	<ul style="list-style-type: none"> • Reduce greenhouse gas emissions in the construction sector by 16% by 2030 • Reduce building heat loss by 20% by 2020 and by 40% by 2030, compared to 2014 levels • Improved insulation for existing panel apartment buildings of 18,184 households in Ulaanbaatar. • Increase the area of green facilities in urban areas and settlements to 25 percent of the total area,
4	Low pollution energy, Pollution prevention and control	<ul style="list-style-type: none"> • <i>Pollution:</i> decrease air pollutants by 80%, prohibit the use of unprocessed coal anywhere except for thermal power plants in Ulaanbaatar, and reduce air and environmental pollution by at least 50% by 2025
5	Sustainable water and waste use	<ul style="list-style-type: none"> • <i>Waste:</i> Reduce GHG emissions from waste by 21% by 2030. Reduce solid waste in landfills by 20% by 2020, and by 40% by 2030, by improving proper reduced waste management, increasing waste recycling and processing, and promoting the production of value added products. Increase the amount of recycled waste to 30 percent of the total waste. • <i>Water:</i> Provide at least 90 percent of the population with access to safe drinking • Maintain availability of water resources through protection of runoff formation zones and their native ecosystems in river basins • Protect at least 50 percent of the water resources, river streams and water sources under special protection and find solutions for sustainable water supply in Ulaanbaatar and for industries and mining in the Gobi region

No	Categories	Key reference policy targets
6	Sustainable agriculture, land use, forestry, biodiversity conservation & eco-tourism	<ul style="list-style-type: none"> • <i>Pasture</i>: Introduce sustainable pasture management practices to maintain livestock population at appropriate levels according to the pasture carrying capacity. • Support the business and economics of herders and herder groups, and small and medium sized farmers. • <i>Agriculture</i>: Increase the processing of raw materials such as leather, wool and cashmere to 60 percent by 2020, and to 80 percent by 2030, through the promotion of sustainable agriculture development, and the development of industrial processing cluster that is export-oriented and based on green technology. • Improve supply of domestic demand for wheat, potatoes and vegetables through reduced land degradation due to crop production, and improved soil fertility, by introducing agro techniques for soil maintenance and efficient advanced technology for irrigation and establish forest zones. • <i>Forest</i>: reduce GHG emissions from deforestation and forest degradation by 2% by 2020 and 5% by 2030. • <i>Land management</i>: Promote efforts aimed at reclaiming at least 70 percent of degraded land, and protect 30 % of the territory under the state by 2030. • <i>Eco-tourism</i>: Develop eco-tourism regions, products and services, promote Mongolia's nomadic culture and tourism brand globally, increase revenue from tourism, and increase the number of foreign tourists to two million annually.
7	Clean transport	<ul style="list-style-type: none"> • Increase the share of private hybrid road vehicles from approximately 6.5% in 2014 to approximately 13% by 2030. • Shift from liquid fuel to LPG for vehicles in Ulaanbaatar and aimag (province) centres by improving taxation and environmental fee system. • Introduce sustainable public transportation systems (e.g BRT). • Develop an environmentally sound infrastructure and transportation network with no adverse impacts on nature, human health and biodiversity.

GREEN TAXONOMY

1 Renewable energy			
Sub-category	Technologies	Example	Threshold
 1.1 Wind	1.1.1 Energy generation facilities	Onshore wind electricity generation facilities, distributed wind electricity generation facilities, wind pumps, wind turbines	
 1.2 Solar	1.2.1 Power generation facilities (PV & CSP)	Onshore Centralised and distributed solar power facilities, including concentrated solar power (CSP) plants, solar photovoltaic (PV) power, distributed solar PV station	
	1.2.2 Small-scale distributed solar systems	Small-scale portable solar home systems, mini grid and other types of stand alone systems to power small communities	
	1.2.3 Solar thermal application facilities	Facilities for application and generation of solar thermal energy, including solar water heating and other thermal applications of solar power in all sectors	
1.3 Geothermal	1.3.1 Power and heat generation facilities	Facilities for electricity generation and thermal applications of geothermal power in all sectors, geothermal heat pumps for space and district heating	
 1.4 Hydro-power	1.4.1 Small-to medium-scale power generation facilities	Hydro power electricity generation facilities, including run of river, small-hydro with or without storage, impoundment, pumped hydro power plant	
1.5 Others	1.5.1 Other heat generation facilities	Heat pumps using soil, water, and air gradients	

 <p>1.6 Supply chain and supporting infrastructure for renewable energy</p>	<p>1.6.1 Manufacturing of renewable energy equipment</p>	<p>"Manufacturing or assembly plants for wind, hydro & geothermal turbines, PV cells & components, CSP dishes, troughs & components, geothermal pumps. Manufacturing of products, key components, equipment and machinery for the following renewable energy application:</p> <ul style="list-style-type: none"> • Geothermal Power • Hydropower • Solar Concentrated Power (CSP) • Solar Photovoltaic (PV) • Wind energy "
	<p>1.6.2 Transmission lines and supporting infrastructure for renewable energy systems</p>	<p>New, expanded and improved transmission systems (lines, substations), storage systems (battery, mechanical, pumped storage) and new information and communication technology (smart-grid and mini-grid) for scaling up the utility of renewable energy. dedicated transmission lines, large and small scale storage, smart grid, heat and electricity meters and sensors, inverters/controllers, transformers, voltage regulators, switchgear, roads for clean technology transportation</p>
	<p>1.6.3 Storage systems for renewable energy</p>	<p>"Batteries, capacitors, compressed air storage and flywheels; Large scale energy storage facilities, and manufacture facilities dedicated to any of the above"</p>

2 Low pollution energy			
Sub-category	Technologies	Example	Threshold
 2.1 Bio-energy	2.1.1 Bio-energy product facilities	Facilities for producing biofuel, biomass, biogas and other bioenergy products including fuel preparation process facilities, pre-treatment facilities and bio-refinery facilities, gaseous, liquid and solid (forest) biofuel manufacturing facilities (including anaerobic digestion facilities)	Minimum 80% pollution (PM2.5) reduction compared to coal baseline
	2.1.2 Heat & power generation	Power & heat generation facilities including electricity generation facilities, heating facilities and CHP facilities, biomass power station, biomass CHP station, improved biomass stove, use of agricultural and forest waste, wastage from crops for electrification	
 2.2 Sources alternative to coal	2.2.1 Gas power & heat generation	Waste heat recovery from gas fuelled power generation, Facilities for heat and electricity generation using natural gas (natural gas power station, distributed natural gas station, CHP, natural gas stoves), CBM (coal bed methane), CMM (coal mine methane), shale gas, LPG, LNG, CNG, DME as a substitute of coal or a supplement of renewable energy.	
2.3 Waste to energy	2.3.1 Waste to energy facilities	Waste to energy plants and other facilities. incineration, gasification, pyrolysis and plasma, facilities for solid waste treatment with production of electricity or heat as a byproduct	
 2.4 Fuel switch	2.4.1 Fuel switch in energy generation	Switch to electricity heating or LPG heating	
	2.4.2 Dedicated charging for transportation and alternative fuel infrastructure	(when separate from fossil fuel filling stations and garages)	

3 Energy efficiency			
Sub-category	Technologies	Example	Threshold
 <p>3.1 Energy efficiency improvement in existing industrial facilities</p>	3.1.1 Energy efficient equipment and technology improvement	Industrial energy-efficiency improvements through the installation of more efficient equipment, changes in processes and management, reduction of heat losses and/or utilization of residual heat and pressure. energy efficiency measures based on energy audit report, energy-efficient motors, VFD drives for compressors, pumps and fan systems , high energy-efficient boilers,	Minimum 20% GHG emission reduction
	3.1.2 Installation of CHP/co- or tri-generation equipment	Installation and operation of co-generation and combined-cycle plants that generate electricity in addition to providing heating. CHP plant, combined-cycle plants	
	3.1.3 Energy efficiency in energy generation, transmission and distribution systems	Retrofit of transmission lines or construction of new substations and/or distribution systems to reduce energy use and/or technical losses including improving grid stability/reliability; DC (direct current) application. smart grid, high-voltage grid	
	3.1.4 District heating	Rehabilitation of district heating systems with distributed energy station or other technology. distributed energy station	
 <p>3.2 Energy efficiency improvements in the utility sector and public services</p>	3.2.1 Energy-efficient lighting or equipment	Energy-efficiency improvement in utilities and public services through the installation of more efficient lighting or equipment; LED street lighting system, lighting improvements of commercial, retail, wholesale, office buildings and other non-industry facilities.	
	3.2.2 Energy efficient products (end user)	Purchase and application of more energy efficient end-user products. energy saving refrigerator, washing machine, heater	
	3.2.3 Energy conservation services	Energy conservation services to energy end-users, including industries, buildings, and transport systems, including energy audit, ESCOs. energy audit, contract energy management	

 <p>3.3 Energy efficient buildings</p>	<p>3.3.1 Energy efficient building construction</p>	<p>ENERGY: Use of energy efficient architectural designs, appliances and equipment, and building techniques that reduce building energy consumption</p>	<p>Compliance to local building norms &/ Mongolian Energy Passport</p>
	<p>3.3.2 Efficiency improvements in existing commercial, public, residential and industrial buildings</p>	<p>ENERGY: lighting, appliances and equipment, heating/cooling systems, architectural or building changes that enable reduction of energy consumption WATER: water fixtures, recycling/ rainwater harvesting systems, building changes that enable reduction of water consumption</p>	

4 Green buildings			
Sub-category	Technologies	Example	Threshold
 <p>4.1 Green buildings</p>	<p>4.1.1 Construction of new green buildings (commercial, public, industrial and residential)</p>	<p>"ENERGY: Use of highly efficient architectural designs, energy efficiency appliances and equipment, and building techniques that reduce building energy consumption, exceeding available standards and complying with high energy efficiency certification or rating schemes, such as green building rating standards of Mongolia or equivalent international standards WATER: Use of water efficient fixtures and equipment, and building techniques that reduce building water consumption, exceeding available standards and complying with high water efficiency certification or rating schemes, such as green building rating standards of Mongolia or equivalent international standards MATERIALS: Use of construction material which minimizes contents that require high amount of energy to manufacture, such as steel or cement, and uses materials with low manufacturing energy or reused/recycled materials."</p>	<p>Compliance to local building norms &/ Mongolian Energy Passport; or To have internationally and nationally recognized green building certification such as LEED, EDGE, BREEAM, Energy certifications such as US Energy Star and energy labeling schemes such as Energy Performance Certifications in the EU</p>
 <p>4.2 Green building products and materials</p>	<p>4.2.1 Manufacturing of green building materials and products</p>	<p>Efficient and low carbon building systems (lighting, heating, air conditioning, lifts, escalators, metering, ground source heat pumps and etc.,) and low energy efficiency materials, organic wool insulation materials</p>	<p>Compliance to local building norms; or To have internationally and nationally recognized green building, building material certification or labelling</p>

4.3 Green infrastructure	4.3.1 Green infrastructure	"Multi-purpose green areas (water retention, shading, recreation, biodiversity corridors, soft lining for pedestrian and bicycle paths), flood protection (Surge barriers, pumping stations, levees, gates), street lighting, improvement of disposal sites and etc., road"	Compliance to local building norms
	4.3.2 Ger area improvements	Khashaa improvements including retrofitting of existing homes, new energy efficient and green houses construction, improved sanitation facilities (septic tank, waste recycling, ...), electricity, clean coal technologies, heat pumps or district heating connection for heating, energy storage, rainwater harvesting, grey and black water recycling and landscaping, site improvements and etc.,	Compliance to local building norms

5 Pollution prevention & control			
Sub-category	Technologies	Example	Threshold
 5.1 Air quality	5.1.1 Industrial air pollution treatment, recycling facilities	Industrial air pollution treatment facilities, exhaust gas, and effluent reducing and recycling facilities. de-sulfurization and de-nitration facilities, filter-bag, exhaust gas burner	Minimum 20% GHG emission reduction
	5.1.2 Production and deployment of clean heating appliances for households and MSMEs	Production, purchase and deployment of clean heating appliances to reduce air pollution. electric radiator (space heater), electric cartridge heater, night storage heater, electric floor heating, heat wall	
	5.1.3 Carbon capture and storage	Facilities and products dedicated to CCS	
 5.2 Soil	5.2.1 Soil pollution reduction and remediation facilities and infrastructure	Facilities and infrastructure using soil remediation technologies and products for remediation of polluted or degraded soil.	
	5.2.2 Self-contained and eco-sanitation toilet solutions for ger areas, tourist camps and small businesses	Installation of self-contained and eco-sanitation toilets that contributes to soil pollution reduction. composting toilets, container-based toilets, dry toilets, septic systems, UDDT	

6 Sustainable water and waste use			
Sub-category	Technologies	Example	Threshold
 <p>6.1 Sustainable water & water efficiency</p>	6.1.1 Production, purchase and deployment of water saving, monitoring, storage and distribution technologies and systems	Production, purchase and deployment of water saving, monitoring, storage and distribution technologies and systems, drinking water wells in pasture land for herders and for wild animals; drinking water purification technology and equipment; ground water reservoirs to collect snow melt or over flood and to regulate river flow rate; use of mine runout water for industrial, agricultural, recreational or other use. industrial water saving technology and measurement equipment, agricultural water saving irrigation, smart networks for water monitoring, early warning systems for storms, droughts, floods or dam failure, water quality or quantity monitoring and measuring processes, rainwater harvest systems, groundwater recharge systems, canals and distribution systems, Stormwater management	National VCP ("Khaan Shirkhegt") and international standards such as REACH, Oeko Tex, GOTS
	6.1.2 Water recycling facilities	Unconventional water reuse facilities or infrastructure. water recycling systems, recycling mine water , grey water reuse and recycling systems, sewage/ drainage networks which segregate storm water from the sewage	
 <p>6.2 Waste and wastewater</p>	6.2.1 Solid waste management facilities	Construction and operation of solid waste (including medical and hazardous waste) management, treatment & disposal facilities. refuse incinerator, solid waste land fill facilities, sanitary landfill (with or without gas capture)	
	6.2.2 Waste collection, sorting and material recovery, re-use, and recycling facilities	Facilities for collection, sorting, material recovery, re-use and recycling of materials. facilities for the recycling of building materials, metals, plastics, glass, paper, scrap electronics	
	6.2.3 Composting facilities	Facilities for the production of compost from organic waste	
	6.2.4 Wastewater treatment facilities	Waste water collection networks, storage, treatment and disposal facilities. waste water plant, sludge treatment facilities, drinking water treatment, desalination plants, wastewater treatment facilities, manure and slurry treatment facilities	

6.3 Resource conservation and recovery

6.3.1 Technology enabling the switch of Raw Materials

Toxic with non-toxic, virgin with recycled

7 Sustainable agriculture, land use, forestry, biodiversity conservation & eco tourism

Sub-category	Technologies	Example	Threshold
 <p>7.1. Sustainable agriculture</p>	<p>7.1.1 Organic agriculture and animal husbandry products (except textile)</p>	<p>"Production of agricultural, husbandry, and fishery organic products (including facility construction and operation) that meet the following clean production standards: 1) relevant international or national standards on organic products, and acquired organic or green product label 2) Environmental and quality standards for the use of pesticides, fertilizer, veterinary drug, feed and feed additives, food additives, and animal hygiene 3) Sustainable farming practices, such as waste management and water efficiency 4) Sustainable supply chain practices (e.g food loss avoidance); organic food production that obtained international/national USDA, Fair Trade labels, production that contributes to improved animal health, animal husbandry, manure management with biodigesters, improved nutrition, increased productivity"</p>	<p>National VCP ("Khaan Shirkhegt") and international standards such as REACH, Oeko Tex, GOTS</p>
	<p>7.1.2 Sustainable textile processing and producing</p>	<p>Hide and skin processing methods, for extensive farming only, with fixed traceability and quality management, Production process that meet relevant sustainable textile/cashmere/wool/yak down production standards and use eco-dyeing technologies, chemicals and bio-agents; production processes that meet international and national standards and voluntary code of conducts, which also includes standards on its its liquid and solid waste treatment</p>	

	<p>7.1.3 Climate smart agriculture (=Sustainable pasture & livestock management)</p>	<p>Reduction in energy use and water use in traction, irrigation, and other agricultural or husbandry processes, and decrease in land use, ie. Application of livestock standards to sustainably manage pasture land and to promote quality (high yield) based livestock production/management. efficient tillage (prevention from drought), aquaculture, herders/herding communities reducing their herd sizes and adopt more sustainable livestock production practices</p>
<p>7.2 Sustainable forest management & conservation of biodiversity and ecosystems</p> 	<p>7.2.1 Afforestation and reforestation</p>	<p>Afforestation (plantations) on non-forested land or reforestation on previously forested land; REDD+ (Reduced emissions from deforestation and forest degradation) activities</p>
	<p>7.2.2 Sustainable forest management</p>	<p>Activities that increase carbon stocks or reduce the impact of forestry activities through associated management, information systems and other technologies; Examples? Private forest fellowships applying sustainable forest management practices</p>
	<p>7.2.3 Sustainable timber & pulp production</p>	<p>Facilities for sustainable timber production and pulp production; production facilities incorporating efficient pulping process, biorefineries, use of recycles</p>
	<p>7.2.4 Conservation of biodiversity and ecosystems</p>	<p>Biosphere conservation projects through protection and/or remediation of degraded ecosystems; construction and maintenance of ecological function area, like specific wildlife habitat, wetland, desert</p>
	<p>7.2.5 Natural land management</p>	<p>Facilities and infrastructure for grassland preservation of natural grassland and restoration of degraded grassland, and Soil restoration and regeneration in agriculture lands; construction of artificial grassland, guardrail to reduce overgraze in natural grassland, water retention activities, Land remediation and clean up</p>

 <p>7.3 Sustainable tourism</p>	<p>7.3.1 Products and services promoting eco-tourism development</p>	<p>Development of tourism resources targeted at ecological restoration and protection; community based tourism, protection and development of national parks and geological parks, protection of natural heritage and specially protected areas</p>
	<p>7.3.2 Sustainable hotel & camp management</p>	<p>Management of hotel and camp operations in compliance with locally or nationally recognized sustainable hospitality industry standards</p>

8 Clean transport			
Sub-category	Technologies	Example	Threshold
 8.1 Low carbon vehicles	8.1.1 Low carbon vehicles purchase	Low carbon vehicles purchase, including electric vehicles, hydrogen vehicles, hybrid vehicles	
	8.1.2 Low carbon vehicles manufacturing supply chain facilities	Dedicated manufacturing facilities for vehicles and key components; batteries being used in eligible vehicles	
8.2 Low carbon freight and cargo transportation	8.2.1 Low carbon freight and cargo transportation	Rolling stock for electrified and non-electrified freight rail	
8.3 Clean transport infrastructure 	8.3.1 Public transport infrastructure	Public transport and freight infrastructure; high-occupancy vehicle lanes, BRT systems, public walking and cycling infrastructure	
	8.3.2 Low carbon transport infrastructure	Dedicated charging and alternative fuel infrastructure (when separate from fossil fuel filling stations and garages); Eco-fuel station, charging station/pile for EV cars, trolleybus, trambus, electric buses and associated infrastructure	
	8.3.3 Low carbon transport planning	Integration of transport and urban development planning leading to a reduction in use of passenger cars; dense development, multiple land use, walking communities, transit connectivity, Smart freight logistics	
8.4 Clean transportation ICT	8.4.1 ICT that improves asset utilisation, flow and modal shift, regardless of transport mode	Public transport information, car-sharing schemes, smart cards, road charging systems, etc
