Decarbonizing Cement

IFC Cement Decarbonization Tool

Step One in Your Decarbonization Journey

Building on its $7.1 billion cumulative cement industry investment portfolio, IFC has developed a tool to help cement companies in emerging markets to start planning the transition. The tool helps firms make an initial high-level assessment of major decarbonization options.

Rooted in IFC’s global industry knowledge of over 50 years, the tool helps firms explore five decarbonization measures at the plant level:

- Alternative fuels
- Electric power supply mix
- Blended cement
- Waste-heat recovery
- Select equipment configuration changes

The resulting analysis drives key strategic choices. It identifies anticipated greenhouse gas (GHG) reductions, high-level CAPEX needs, and estimated payback periods. This information then helps create an approximate Marginal Abatement Cost Curve. With these results, IFC’s tool can become the basis for decarbonization strategies and new climate-friendly investment projects.

The Industry Context

Moving to Net Zero

The cement industry is the source of over seven percent of GHG emissions. To reach net zero by 2050, it must decarbonize at a rate of 3 percent per year by 2030, the International Energy Agency estimates.

The first step of becoming a net zero cement producer requires taking a strategic stock of major commercially-proven decarbonization measures, drawing on advisory and investment support from a trusted global partner sharing a client’s vision for sustainability, impact, and long-term success.

Example of the tool’s outputs for a 5,500 tpd clinker integrated cement plant:

The charts below show the carbon footprint before and after the decarbonization measures were considered. The CAPEX is estimated at $70m+ with the simple payback time. Ranging between less than eight years.
FOUR STEPS

We will support your company in defining needs, developing strategy, guiding implementation, and providing financing. Our tool has four components:

1. VISIT THE TOOL’S WEBPAGE
   To learn more details and see case studies.

2. CONTACT IFC
   To discuss your decarbonization ambitions and future investment needs.

3. DISCUSS THE RESULTS
   Of the tool with IFC industry experts.

4. PARTNER WITH IFC
   On advisory and investments needs to make your decarbonization ambition a reality.

PERCENTAGE CONTRIBUTIONS TO NET ZERO IN 2050*
