GREEN BUILDINGS
FOR A SMARTER WORLD
In today’s competitive world, property developers are trying their best to build sustainably. Resource-efficient buildings clearly have impact, from the corporate bottom line to a homeowner’s pocket. But how does a developer confidently capture this value while gaining brand recognition?

The solution is EDGE, a green building certification system for emerging markets created by IFC, a member of the World Bank Group. **EDGE is a measurable way for builders to optimize their designs**, leading to a more investment-worthy and marketable product. By keeping certification fast and inexpensive, EDGE keeps pace with the momentum that developers need to stay at the forefront of the green building trend.

The EDGE software shows within minutes how committing to a few practical energy and water-saving options improves building performance at little or no cost. The numbers are brought to the forefront to reveal the most economically viable path to building green.

EDGE focuses the certification process on technical aspects that yield meaningful results. This makes it easier for developers to build a portfolio of innovation that attracts new customers and boosts brand equity.

“**EDGE paints sustainability in numbers, forecasting the possibilities of what we can achieve for our customers and the environment.**”

– Tulio Botelho Mattos

**Director, Canopus**

The Green Building Council Indonesia is an independent organization which advocates for ecological sustainability in the planning, construction, and operation of buildings in Indonesia.
EDGE proves that the next generation of buildings can be more profitable while making a lighter carbon footprint. To qualify for certification, a new building must achieve a 20% reduction in energy, water, and embodied energy in materials compared to a conventional building. EDGE works for a variety of residential and commercial buildings in nearly 100 countries, including homes and apartments, hotels and resorts, office buildings, health care facilities, and retail establishments.

Building design teams can now adopt a quantitative approach, as the EDGE software shares localized costs and climate data for site-specific results. The interface enables easy modeling of future performance without sacrificing design integrity. EDGE is useful for all stages of a project’s life cycle – from the pivotal moment when design is born, straight through to on-site decision-making.
Beneath an intuitive interface is a powerful engine that understands local climatic conditions and how the building will be used by occupants. Discover the ideal bundle of measures for the best investment return within minutes. The EDGE software is free to everyone with certification available at a modest cost. With EDGE, green buildings are suddenly available to all.

“EDGE leverages the power of gaming…it only took me 30 minutes to design my first project.”

Never before have building design teams been able to quickly and easily choose systems and solutions while immediately viewing the financial and environmental impacts. The EDGE complimentary software is available at edgebuildings.com.
A selection of companies that have integrated EDGE certification into their business models:

- Imperial Homes
- SAMHI
- NJ Zinnia
- Hoteles City Express
- FPT Urban Company
- CareMed
- PT Ciputra
- VBHC
- Vinte
- Nam Long
- Canopus
RESIDENTIAL CASE STUDY
Homes in the Philippines

Why Homebuyers Prefer a Green Home

- Cuts utility, maintenance, and repair costs.
- Commands a higher re-sale price.
- Creates a more comfortable lifestyle.
- Inspires pride of ownership.
- Protects the planet.

EDGE-certified homes attract prospective buyers who understand the long-term value of their investment in a green residence, with its lower utility bills and higher re-sale price. Homeowners also believe in the sense of fulfillment that comes with making a responsible choice. Developers can capitalize on these advantages and aspirations to win new customers and promote their brand.

“Soon everyone will live in a solar-powered home, as they make perfect business sense for builders and buyers. EDGE will make this happen.”

— Emma Imperial
Chairman, Imperial Homes
There are many reasons to opt for a resource-efficient commercial building. Tenants and guests will appreciate the value proposition of reduced operational costs. Lower break-even occupancy rates will protect against market variability. And investors will respond well to a strong balance sheet.

The EDGE software provides an opportunity to explore technical options while viewing capital expenses and utility savings. Extra capex of just two percent has been known to produce savings greater than 10 times the initial cost of building green. In addition, the building itself will command greater market value due to its ability to deliver on the operational front.

Top Reasons to Own an EDGE-Certified Building

- Sends a positive signal to investors.
- Drives profitability that leads to expansion.
- Increases property valuation.
- Ensures cost control and consistency across properties.
- Complements efficiencies in construction and labor.
- Contributes to a brand of corporate sustainability.

“We have a strong ethos of corporate responsibility. EDGE channels that passion into reality in a way that our investors understand.”

– Abelardo Loscos
Director of Corporate Finance and Investor Relations
Hoteles City Express
EDGE Certification
HOW IT WORKS

Certification is initiated at the early design stage, when details of the project are entered into the EDGE software and green options are selected. The project must reach the EDGE standard of a 20% improvement in energy, water, and materials as measured against local construction practice. When achieved, the project is registered for certification.

During the certification process, documentation is submitted by the client and reviewed by EDGE-trained auditors at the design and construction stages, with a site audit performed. Projects that meet the EDGE standard receive a certificate confirming predicted performance.

GBC Indonesia
A CERTIFICATION PARTNER FOR EDGE

IFC works with premier partners to scale up green building growth in emerging economies.

The Green Building Council (GBC) Indonesia collaborates with various stakeholders such as architects, engineers, developers, academics, government representatives, manufacturing industries, and contractors. To achieve its goals, GBC Indonesia has three main programs:

- Education for building professionals and interested members of the public
- Implementation of green building certification, including EDGE
- Increasing general awareness of green buildings through networking, advocacy, and publications

For more information, including pricing, visit www.gbcindonesia.org
An innovation of IFC, EDGE creates intersections among developers, building owners, banks, governments, and homeowners to deepen the understanding that everyone wins financially by building green. By helping to push the market forward on the regulatory front while pulling on the voluntary side, EDGE jumpstarts the mainstreaming of green buildings to help tackle climate change.

IFC

IFC is a member of the World Bank Group that focuses on private sector development. Working with partners in more than 100 emerging markets, IFC invests, advises, and mobilizes resources from others, creating opportunity for clients in a broad range of industries. Standing between the public and private sectors, IFC brings market-based solutions to respond to the challenge of creating low-carbon economic growth.
