Introduction

IFC has a long-standing commitment to developing the private equity asset class in Emerging Markets (EMs).

We now have over ten years of experience with a specialist group focused on investing in Funds and we think other investors may benefit from sharing this experience.

Based on our experience and analysis of data from our portfolio we draw the following thoughts:

1) Emerging Market Private Equity (EMPE) has matured significantly as an area of investment. Returns have exceeded those on US PE over the last 10 years and both US and EU returns over the last 5 years.

2) There appear to be diversification benefits in EMPE due to low leverage, its focus on domestic growth and different industry coverage relative to listed markets.

3) The returns on EMPE are driven by growth and efficiency rather than leverage or multiple expansion.

4) Significant growth-oriented PE opportunities are available beyond the small number of countries in which most EMPE investors are currently concentrated.

5) Many of the risks of EMPE are over-stated and we provide data which places these risks in perspective.
Presentation

We intend that this becomes a living document.

We have based the content of this presentation on conversations with investors about the issues they have when they think about investing in EMPE.

There will be other issues of interest beyond the ones presently covered, so we have used PowerPoint to make the information available as it is easy to up-date and add new information in response to requests.

We encourage you to ask us questions and, if we have the information with which to answer or provide some insight, we will add it to the presentation posted on our website: http://www.ifc.org/funds

If you find the information useful and use it in your own presentations, we would appreciate an acknowledgement of IFC and the named data providers.
Acknowledgements

It is possible to present this information due to the cooperation and hard work of a large number of people. We would particularly like to thank:

• The Managers of IFC invested funds who have been very generous in responding to our requests for information.

• The Emerging Markets Private Equity Association (EMPEA) for providing market data and insights.

• Cambridge Associates for providing benchmark data.

• Markus Taussig, now a professor at the National University of Singapore, for gathering and analyzing much of the data.
Private Equity in Emerging Markets Has Come of Age
Private Equity Has Proven Attractive Relative to Public Equity

Returns on EM PE have exceeded those on US PE over 10 years and both US & EU PE over 5 & 3 years.

A disproportionate number of EM funds are in the top half and top quartile of the Global PE Universe for vintage years from 2004. For vintage years 2004 to 2008 EM Funds constitute between approximately 30% to 45% of the top quartile of the Global PE Universe.

Growing Domestic or Regional Companies Provide the Deal Flow

As a result of the trends in deregulation and openness, most of the EMPE opportunities are companies targeting growth in Domestic markets or Intra-emerging-market growth.

**Target Market - Focus**
- Domestic, 72%
- Regional, 12%
- Emerging Markets, 8%
- Industrialized Markets, 5%
- Global, 3%

**Target Market - Return**

Sample: * IFC Funds Portfolio 2009  833 companies with clearly indicated market focus ** 300 companies that were fully exited
There are Four Basic Ways to Create IRR

A PE fund can achieve the same IRR through any of four basic strategies: leverage, multiple expansion, growth and efficiency.

Most funds use a blend of the four.

In EMs IRR is driven by growth & efficiency (see Slide 12)

Returns on Private Equity in Emerging Markets are Driven More by Growth than Leverage

Higher growth and lower leverage makes the source of risk in EMPE less cyclical and more operational

</table>

Sample: 2009 * 527 companies in IFC-invested funds with holding time of at least one year ** 604 companies in IFC-invested funds, not including financial services
**PE in EM Creates Jobs and Supports SMEs**

An analysis of investments made by 64 PE funds between 2000 and 2010

- 291,000 net new jobs created by 466 portfolio companies.
- Larger companies create more jobs.
- 14.7% growth in jobs across the sample.
- Smaller companies grew faster at 18%.
- Fastest job growth in companies with 20-100 employees.
The Opportunity is Larger Than You Think
Both the Breadth and the Quality of the EMPE Opportunity Have Improved Since 2000

• Since 2000 the number of countries in which there is a meaningful volume of deal flow suited to PE (equity with real influence or control) has increased considerably.

• Having adequate deal flow to support local country-based teams improves the quality of the opportunity as deal origination, structuring and providing advice to the companies, can be done in close proximity and in real time by people embedded in the local market.
2000 - the Start of a Rapidly Growing Opportunity

[Map showing developed markets and emerging markets with private equity opportunity]
2012 - The Opportunity is Very Broad

- Developed Markets
- Emerging Markets with Private Equity Opportunity, mostly single country, some regional
What Has Driven the Growth of the PE Opportunity?

PE requires (i) interesting businesses in which to invest, and (ii) access to equity stakes with influence over the business.

Three trends have increased both the number of businesses and the ability to acquire influence.

• The move to market-based economies since the 1990s is increasing entrepreneurial activity and the number of businesses of interest to PE (see slide 19).

• The opening of trade and capital flows since 2000 increases both opportunities to expand and competitive pressure, leading to more business owners seeing third party capital as attractive (see slide 20).

• The close identification of family status and wealth with direct ownership of a company reduces as portfolio wealth becomes an option and is seen to work, reducing reluctance to allow in third party equity.

• Future growth in the PE opportunity in EM will require a continuation of these trends plus improvement at the local level in the ability to enforce contracts and access to debt (see slide 21).
Improved Local Conditions Create Businesses

Measures of conditions for private business have improved across a wide range of emerging markets since the 1990s, leading to an increase in the number of companies of interest to PE.

The scale of the improvement in conditions for private business in EMs since 1990 is significant.

Source: Fraser Institute, Economic Freedom of the World (EFW) Index
Increased Openness Creates PE Deal Flow

Emerging markets have opened their trade and capital accounts since 2000, increasing both opportunities to expand and competition in domestic markets. This creates more situations where sale of equity with influence over the business is seen as desirable by owners in order to attract the capital or the skills needed to expand, to compete, or to increase focus on core business by sale of non-core business.

Key Drivers of Growth in the PE Opportunity

- **Total Demand for Equity**
  - Requires continued GDP Growth

- **Control/Influence Positions**
  - Requires continued growth in availability of control/influence positions that PE needs

- **Growth Equity (given restricted leverage)**
  - Banking Systems & Debt Capital Markets need to develop to increase access to leverage

- **People can get close to (absence of distance Relationships with weak legal system)**
  - Ability to enforce contracts needs to improve to widen circle of people with whom one can do business
Low Penetration - Room to Grow Further

Even in the BRICs, fundraising as a percentage of GDP is low in EMs compared to the US, indicating much more room to grow.

IFC has out-performed the Emerging Market Index with a much more geographically diversified exposure.

* Includes: Agribusiness, Cleantech, Midcap, Mining, SME, VC and Healthcare Funds
** Includes: Agribusiness, Cleantech, Midcap, Mining, Small business, SME, VC, Healthcare, Debt, Forestry, Infrastructure, Listed, Real Estate, Secondary Funds
*** All PE Fund types excluding Forestry, Infrastructure, Real Estate, and Secondary Funds
Myth Busters: Frequently Cited Risks with Private Equity in Emerging Markets
Minority positions (blue) have performed well in all forms of exit, indicating that the risks associated with minority positions can be managed effectively.

**Median IRR**

**Average IRR**

Sample: 2009 Exits of 61 majority positions and 251 minority positions from IFC invested funds
Smaller Companies Are NOT Too Risky

Experience in deals as small as $2 million has been positive, suggesting that smaller companies are less risky than commonly perceived.

Sample: 2009  * 313 exits from IFC invested funds ** 323 exits from IFC invested funds
Attractive exits are happening despite less developed capital markets, although access to an IPO improves returns.

Average Holding Period = 4.9 years

Sample: 2009 * 325 exits from IFC invested Funds ** 266 non-write-off exits
A Fund Manager With the Right Skills CAN Overcome 1st Time Fund & Frontier Risks

IFC’s experience is that the differentiating factor in fund quality is the Manager’s skill set, not 1st time fund risk or a frontier focus.

|                | IRR as of March 2009 (simple average %) | Development Impact Score | 1st Time Funds % | IDA % (<$1000 GDP per capita) | Average Deal Quality Score
